8 years designing and building interfaces for people to better interact with complex, technical systems e.g. derivatives trading, ML pipelines, AI insurance tools, and surgery. My approach considers system transparency from the start and prioritises user trust and comprehension. I design in code, ship fast, and thrive in 0-1 environments.

Skills: Enterprise SaaS, Developer Tools, AI-Native Design, Systems thinking, Prototyping (React/TS)

EXPERIENCE

FOUNDING DESIGNER, SENIOR IC QuantCo, London, UK

SEPT 2025 -

- First designer, owning end-to-end product design as QuantCo transitions from a professional services model to enterprise SaaS, scaling its first productised offering, an agentic platform for insurance claims
- Designed and shipped an agent orchestration platform coordinating specialised AI agents for fraud detection and coverage checking, piloted with 200+ users at a major insurance company
- Defined design standards for AI-integrated applications, crafting interfaces that focus on human-in-the-loop workflows, building trust, and enabling meaningful user oversight
- Partnered with engineering to expose AI model capabilities to non-technical users, balancing abstraction and transparency to drive trust and adoption on features such as suggested actions, multi-agent orchestration, and generated summaries
- Using AI-native workflows to extend design capacity, enabling rapid ideation, iteration and more efficient production delivery by streamlining decision-making and developer handoff

RESEARCH SABBATICAL Sorbonne Université, Paris, France

JAN 2024 - SEP 2025

- Fully funded research on applications of mixed reality in surgery. Keywords: AR/VR, Context-Adaptive Interfaces
 - Built context-adaptive interfaces for the HoloLens2 to test with surgeons, collect feedback and iterate
- Publication: [How Do People Position Assistive Information During Physical Tasks? Insights for Designing Cross-Domain AR Systems](#) (awarded Honourable Mention)

TECHNICAL UX DESIGNER QuantumBlack (AI by McKinsey), London, UK

NOV 2022 - JAN 2024

- Worked on [Kedro](#), an open source Python developer tool for creating maintainable data-science code and scalable machine-learning pipelines
- Led project to improve CLI onboarding experience from end to end, delivering user research, designing solutions and performing design QA during implementation. Research and official writeup for the work can be found on the [Kedro github](#) and [Kedro blog](#)
- Conducted user research with data scientists and machine learning engineers to improve developer experience
- Designed outreach and learning opportunities to drive adoption of Kedro in data science communities
- Mentored other designers on technical skills, leading workshops on Git, Web Hosting and Figma Variables

LEAD PRODUCT DESIGNER Maven Securities Ltd, London, UK

AUG 2020 - NOV 2022

- First design and front-end hire at the company, leading design on a greenfield internal derivatives trading platform: a data-intensive, table-based interactive web dashboard
- Designed and implemented company-wide design system and component library
- Liaised with engineering teams to guide API design, aligning it with design and front-end needs.
- Participated in design and front-end hiring to expand team (scaled to 3 FTEs)
- Built UI in React and applied styling to features built by the front end team

UX ENGINEER Improbable Worlds Ltd, London, UK

SEP 2018 - AUG 2020

- Worked across Games and Defence teams to build internal developer tooling, customer-facing web apps and a military decision-support tool, translating complex technical systems into usable interfaces.
- Conducted usability testing with customers, and evaluated feedback for continual feature development.
- Built and maintained a reusable component library and design system to enable rapid prototyping and consistency across products.

EDUCATION

MSc Human Computer Interaction University College London

BEng Computing Imperial College London
